

Framework

What is Framework7?

Framework7 is a free and open source mobile HTML framework to develop hybrid mobile apps or web apps with iOS native look and feel.

It is also an indispensable prototyping apps tool to show working app prototype.

How it works

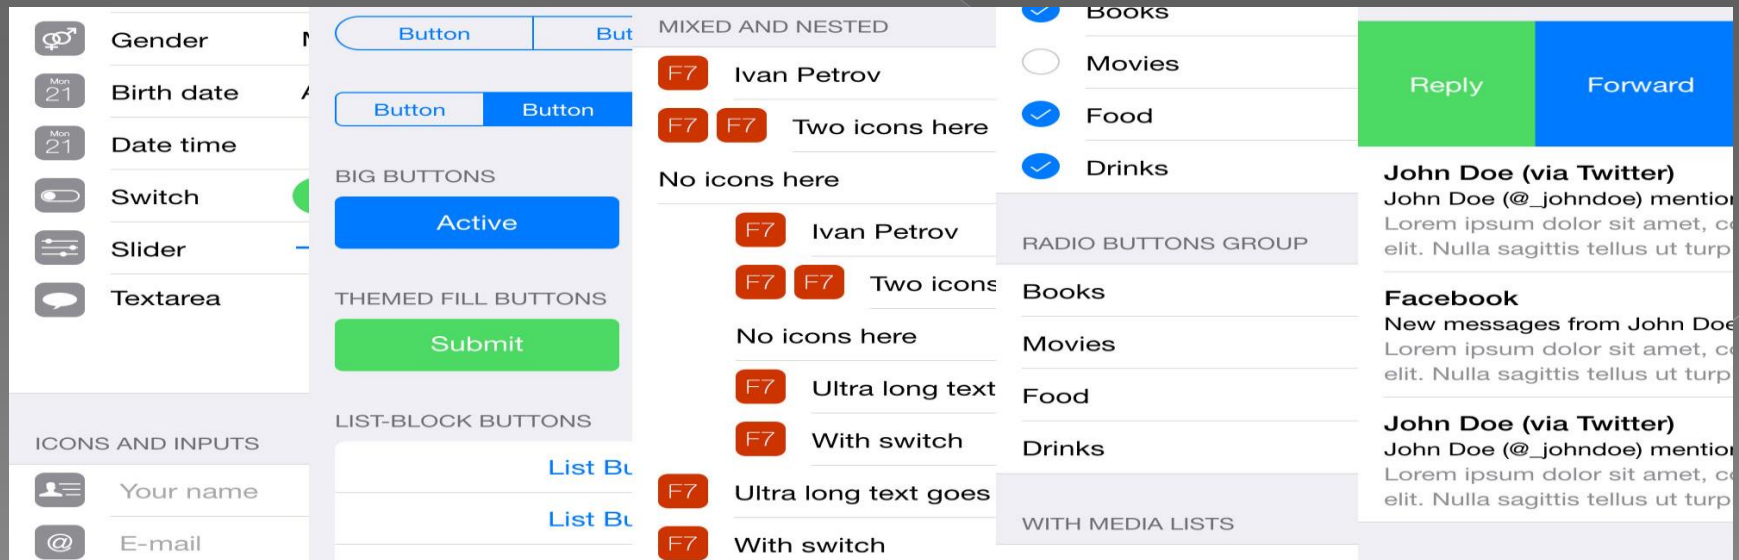

The main approach of the Framework7 is to give you an opportunity to create iOS apps with HTML, CSS and JavaScript easily and clear, like to build a web site.

Indeed, just insert the various libraries and css in our working folder and in the code the special class and java script method.

Features

Framework7 comes with a set of UI elements like popup, media list, side panels, etc; implemented in most cases without javascript.

Another features are the implementations of gestures for the input touch like swipe actions, pull to refresh and messages that i will show you later in my application prototype.

Compatibility

Framework7 is not compatible with all platforms.

It is focused only on iOS to bring the best experience and simplicity.

Building our application

Finally, If we want to develop our application to distribute it it's compatible with PhoneGap for build an hybrid application or a web application in perfect iOS style.

Two examples of how the
Framework7 works...
